**Additional Information / Prior Funding History:**

None.

**Project Description/Justification:**

There are existing twin 10' diameter culverts located under the Seward Highway and Alaska Railroad at Kern Creek along the Turnagain Arm of Cook Inlet. These culverts are tidally influenced, and the salt water has rusted the entire bottom out of both culverts. The culverts themselves have begun to collapse, as evidenced by settling of the highway embankment, guardrail and pavement above them. Both culverts require full replacement or complete re-lining if possible to restore the structural integrity to the highway embankment, to avoid a possible collapse of the Seward Highway and maintain critical fish passage.
