None.

Project Description/Justification:

Willow airport is an important road accessible airport in southcentral Alaska, with significant numbers of based aircraft and a number of commercial leases. It also includes a commercial floatplane facility, which has generated significant controversy in recent years. A noise study was completed for the Willow Lake seaplane facility and showed aircraft noise to be significant at the location. A master plan is needed to address a number of safety and land use issues at the airport, and to plan for its future development.
