Additional Information / Prior Funding History:

None.

Project Description/Justification:

The existing Port Lions Airport regulator building was constructed in the 1980's and is in extremely poor condition with leaks all over, resulting in the wetting of electrical components, causing safety issues. The structure is in failing condition and is degrading rapidly. The electrical components have little security as much of the door and frame have rusted. A recently completed airport Master Plan recommends constructing a new regulator building along with other significant airfield changes.
