## APIAL: Allocation

Category: Transportation
Location: Statewide
Impact House District: Statewide (HD 1-40)
Estimated Project Dates: 07/01/2012-06/30/2019
Appropriation: Surface Transportation Program

Project Type: Construction
House District: Statewide (HD 1-40)
Contact: Pat Kemp
Contact Phone: (907)465-3900

Brief Summary and Statement of Need:
Inspection of all bridges that are on the public roads on a two-year cycle. The magnitude of structural deficiencies found during the inspection causes the subject bridge to be eligible for replacement or rehabilitation with federal highway bridge program funding.

## Additional Information / Prior Funding History:

FY2011 - \$8,000,000; FY2010 - \$8,000,000; FY2009 - \$5,000,000; FY2008 - \$9,000,000; FY2007 -
\$6,800,000; FY2006 - \$8,000,000; FY2005 - \$8,000,000; FY2004 - \$6,000,000; FY2003 - \$
1,300,000; FY2002-\$3,700,000; FY2001 - \$2,200,000; FY2000-\$3,000,000; FY1999-\$925,000.

## Project Description/Justification:

This program provides funds for the inventory, inspection, monitoring, rehabilitation, and replacement of bridges on public highways in accordance with federal regulations. Routine and special bridge inspections are performed under this program. State, borough, municipal and village bridges are all inspected on a routine biennial (every second year) cycle. Special inspections, if required, include both underwater and "fracture critical member" inspections which require special access equipment, methods and techniques. Both routine and special inspections attempt to identify potential defects that could lead to catastrophic bridge failure. Maintenance, rehabilitation, and replacement work programs are developed based on findings and recommendations in the bridge inspection reports.

Bridge load rating calculations are also funded by this program. These load ratings are used to identify the safe load carrying capacity of each bridge. These ratings can be used to post deficient bridges and determine the maximum overload the structure can safely carry. This information is used in the issuance of overload permits.

The Federal Highway Administration uses "structural inventory and assessment" (SI\&A) data collected and recorded on the bridge inspection reports to distribute Highway Bridge Rehabilitation
and Replacement Program (HBRRP) funds to the State. The SI\&A is used to calculate a sufficiency rating which identifies structurally deficient and functionally obsolete structures. These bridges are eligible for HBRRP funding for rehabilitation or replacement. The department is implementing a separate Bridge Management Program to identify and schedule maintenance, rehabilitation, and replacement projects.

A portion of this program is used to fund bridge rehabilitation and replacement construction projects that are not being otherwise funded.

This project contributes to the Department's Mission by reducing injuries, fatalities and property damage and by improving the mobility of people and goods.
