

# **State of Alaska FY2003 Governor's Operating Budget**

## **Department of Fish and Game Headquarters Fisheries Management Component Budget Summary**

## **Component: Headquarters Fisheries Management**

**Contact: Robert D. Mecum, Division Director**

**Tel:** (907) 465-4210 **Fax:** (907) 465-2604 **E-mail:** Doug\_Mecum@fishgame.state.ak.us

### **Component Mission**

The mission of the Division of Commercial Fisheries is to manage, protect, rehabilitate, enhance, and develop fisheries and aquatic plant resources in the interest of the economy, consistent with the sustained yield principle and subject to allocations through public regulatory processes.

Our mission is grounded in the State Constitution, Article VIII on natural resources, Sections 1 through 4. Section 4, entitled "Sustained Yield" states: "Fish, forests, wildlife, grasslands, and all other replenishable resources belonging to the State shall be utilized, developed, and maintained on the sustained yield principle, subject to preferences among beneficial uses."

### **Component Services Provided**

The mission is accomplished by gathering information about the status of exploited fish stocks, establishing biological guidelines to protect reproductive biomass, rehabilitating or enhancing where possible, and managing commercial, subsistence, and personal use harvests within acceptable limits. The division implements decisions of the Board of Fisheries which allocates fishery resources between users. The Headquarters Fisheries Management component provides services to the division's programs and to other government and private entities. The principle areas of support include: administration, technical assistance and review, operational and fiscal planning, program implementation and evaluation, statistical reporting, and regulation processing and publications.

Our management authority and responsibility includes a vast array of fish species, geographical locations, fishing gear, types of users and uses of the resource. There are five species of salmon, ten species of crab, four species of shrimp, five species of clams, eighteen major species of groundfish, and a number of miscellaneous shellfish species. The fisheries are numerous and the management systems are often complex. Some of the main tasks carried out by the division in providing its management services include:

- Development of management plans. The public and the Board of Fisheries are part of this process.
- Collection of resource information, such as life histories, abundance, and distribution.
- Collection of fisheries information, such as harvest by gear type, species, stock and location, number of units of gear fished, time fished, and fleet dynamics.
- Manipulation of the fisheries inseason in time to meet reproductive or harvest goals.
- Dissemination of information to the public. This includes fisheries information, regulations, harvest policies, and management plans as well as highly technical reports based on the results of applied research programs.
- Coordination of the operation of 25 regional and area offices, approximately 80 data collection field camps, four aircraft and seven research vessels.
- Coordination of fishery science and applied research for finfish, shellfish and groundfish.
- Coordination of fisheries planning and development efforts.
- Coordination, preparation and management of the division's budget.

### **Component Goals and Strategies**

The goals and strategy of this component are to optimize and sustain the yield of resources important for subsistence, commercial, and personal use fisheries. To create opportunities for Alaskans to participate in new fisheries. To work with the fishing industry to improve the value and quality of commercial harvests.

## Key Component Issues for FY2002 – 2003

### Regional Management Programs

This component is responsible for oversight and coordination of four regional management programs for finfish, shellfish, and groundfish on an annual basis. This oversight includes a commitment to manage consistently to the extent possible and to keep policy makers informed regarding the status of fisheries and fisheries management issues on a continual basis.

### Regulatory Processes

This component is responsible for coordination of the division's participation in the annual Board of Fisheries regulatory process and includes coordination with other divisions. Responsibilities also include coordination between the North Pacific Fisheries Management Council decision-making process and the Board of Fisheries regulatory process.

### Applied Research Program

The management component designs and coordinates the applied research program for the division. It is designed to improve a knowledge base fundamental to effective management of all species within each of the four regions. This program also includes coordination with federal agencies, universities, and the private sector to design research programs that address specific topics such as recent run failures of salmon in the AYK Region and near-shore fisheries research issues.

### Administration

This component is responsible for preparation of the annual budget, accounting for division expenditures, and coordination of personnel, payroll, and other administrative duties. Inherent is coordination of all four regions' efforts in these administrative duties.

### Legislation

This component, through the Commissioner's Office, annually prepares fiscal notes, bill analyses, and department comments on proposed legislation affecting commercial fisheries on a statewide basis. This includes direct participation in the legislative process via testimony at committee hearings and meetings with legislative representatives as requested.

## Major Component Accomplishments in 2001

The Alaska Steller Sea Lion Restoration Team was formed to promote the recovery of SSL populations while sustaining viable commercial fisheries in Alaska. The objectives of the team were to review the justification of fishery restrictions to protect and restore SSL, recommend research priorities and adaptive management strategies designed to identify those factors inhibiting the recovery of the endangered western stock of SSL, and provide increased understanding of fishery and SSL interactions.

Poor salmon returns to western Alaska in recent years have resulted in severe hardships for residents of the area who are heavily dependent on the salmon resources for commercial salmon fishing income and subsistence. The division is developing federally-funded research plans that will assist in understanding and anticipating major changes in salmon production. These research plans will be coordinated with other divisions, agencies, and entities conducting research aimed towards understanding changes in fish production in the Bering Sea.

The division is increasingly involved in new tasks related to dual State-Federal management of subsistence fisheries in the general categories of management coordination, regulatory coordination, and cooperative research and monitoring.

New federal and private funds have been obtained to continue the division's ongoing efforts to develop new fishing opportunities that will strengthen and broaden the economic base of Alaska's commercial fisheries.

Efforts have been made to promote efficiencies and achieve cost savings by reprogramming resources towards the highest priority issues, consolidating or eliminating programs, utilizing staff attrition to downsize the workforce, and developing cooperative resource assessment projects with private entities.

The State manages groundfish in the 0 to 3 mile territorial sea in concert with federal groundfish management actions. The department, along with local communities, the industry, and the Board of Fisheries, has developed some small, slower-paced fisheries that will benefit Alaska coastal communities.
