The Tony Hrebar shooting range is a CBS facility and is in need of repairs and improvements. A group of shooting range users met four times this spring, discussed and came to consensus regarding the improvements that they felt were needed for the facility. They also discussed ways that management of the range could be improved to support better use of the facility by the public including ways to cultivate more safe and respectful use of the rifle range and approaches to user education.

The minor improvements that the Shooting Range committee felt were priorities included:

- Rules signs
- Distance markers
- Targets holders
- Brass collection bins
- Rifle racks
- Repairs to the concrete pads
- Additional surfacing material
- Repairs and improvements to the shooting benches

The State Capital Grant should be used for:

- A single hole vault toilet

Other improvements that the group discussed were upgrading the access road, extending the pistol range, raising the berms between the ranges or creating a skeet area. These improvements were considered too expensive for the available funding. Additionally, creating a skeet area would require extending out of the City's lease area and the proximity of anadromous streams and wetlands would make permitting difficult.

Hope this suffices.

Repairs/replacement of my computer will be taking place today so I will be out in the field more today.

Thanks,

LM
