Additional Information / Prior Funding History:

This is a new project.

Project Description/Justification:

The purpose of this project is to replace the existing metal roof on the Market Housing side of Etohin Heights family housing complex in Wrangell, Alaska.

The projected outcome is to:

- Replace existing roofing.

Etohin Heights Roofing Replacement – utilizes Corporate (AHFC) funds to replace the metal roofing on all buildings in the Corporate-owned Market family housing (32 units) in Wrangell. The roofing was originally installed in 1981 and is now 26 years old. The roofing continues to leak despite regular repairs.

Program Description:

This request will provide funding to replace the existing metal roof on the Market side of Etohin Heights family housing complex in Wrangell, Alaska.

Etohin Heights consists of two separate groups of multifamily housing units referred to as Corporate-owned Market family housing and M213 (low rent) that have been built next to each other on adjoining lots. This request is for the Market Housing units only, as the M213 buildings received new roofing as part of a total renovation project within the past ten years.

The existing metal roof on Market housing units was installed in 1981 and is now approximately 26 years old. In recent

AHFC Etolin Heights Roofing Replacement

FY2009 Request: \$500,000
Reference No: 45386

years, the roof has received attention due to leaks that result in water damage to the interior of the dwelling units. Subsequent inspections reveal evidence of deterioration due to the extreme maritime environment in the area.

In addition to the poor condition of the main roof metal, many of the associated components are in similar (poor) condition due to extended exposure to the harsh climate. There is evidence of caulking failure, rubber sealing gasket failure, and worn fasteners that all contribute to the overall poor condition of the roof system.

Based on the age and condition of the roofing materials, complete replacement is necessary to ensure the protection of substrate structure and interior finishes from further damage that will occur as a result of moisture intrusion.
