Additional Information / Prior Funding History:

This is a new deferred maintenance request.

Project Description/Justification:

Funding is requested to replace the interior lighting and fuel tank at the Kotzebue Hangar. The interior lighting project replaces outdated technology with newer, more energy efficient T-5 lighting. The result will be a decrease in energy consumption and an increase in the lighting that is directed to the floor and work area. T-5 lighting also has little to no warm up period, allowing lights to be turned on and off several times a day without causing a delay to operations.

The fuel tank project replaces the heating oil tank. The heating oil fuel tank is close to its expected useful life and needs to be replaced before it becomes an environmental issue. Priorities and cost estimates may need to be changed to accommodate emergency maintenance projects not listed, actual project costs, and other considerations.
