Funding is requested to address energy conservation requirements in Alaska Army National Guard Facilities in the following communities: Juneau, Ketchikan, Kenai, Kodiak, Nome, and Fort Richardson. The Alaska Army National Guard is tasked with reducing energy consumption at its facilities. Federal Executive Orders 13423 and 13514 prescribe the requirement for using more energy efficient equipment and for utilizing energy obtained from renewable sources. The proposed projects will install equipment and provide designs that utilize available and proven technology.

**Additional Information / Prior Funding History:****Project Description/Justification:**

The installation of light emitting diode (LED) fixtures at Juneau, Ketchikan, Kenai, Kodiak, and Nome Armories work to reduce operating and maintenance costs and increases the lighting at our armories. The cost of purchasing LED lights is decreasing and maintenance of fixtures and bulbs are minimal.

Federal funding guidelines require that a percentage of federal facilities encompass some form of alternative energy use. The Bryant Air Field energy project works to utilize solar heat collection from an expansive southern exposure. Energy from solar panels will augment the current boiler-fired heat source in hangars. Solar heat will reduce the cost of heat replacement from heat loss when hanger doors are opened to move aircraft. Priorities and cost estimates may need to be changed to accommodate emergency maintenance projects not listed, actual project costs, and other considerations.
