Project Description/Justification:

The Federal Aviation Administration (FAA) requires public airport owners to conduct aeronautical surveys for baseline airport data to support development of Airport Layout Plans, project designs, and new approach procedures as part of the National Airspace System (NAS). Whenever a public airport owner anticipates moving a runway threshold, FAA requires an aeronautical survey in order to maintain existing approach procedures. Losing an established approach procedure at an airport for lack of an aeronautical survey can have severe impacts on a community. Inclement weather conditions would prevent aircraft access to the airport, impacting the community's access, medevac, economy and quality of life.

This project contributes to the Department's Mission by reducing injuries, fatalities and property damage, by improving the mobility of people and goods.
