Project Description/Justification:

This project will relieve congestion, improve safety, and better accommodate alternate modes of transportation at the heavily traveled Third Street / Steese Highway intersection. During peak hours there are long delays, and turn lanes are inadequate or non-existent. The resulting congestion negatively affects air quality in this non-attainment area. In addition, the Fairbanks Metropolitan Area Transportation System (FMATS) reports lists this intersection as having the highest number of accidents in the City of Fairbanks, and these include conflicts with pedestrians and bicyclists, as well as motorized vehicles.
