Project Description/Justification:

The purpose of this project is to remedy structural and operational deficiencies at the Ketchikan Ferry Terminal facility. This project will replace and refurbish existing vessel mooring and berthing structures and construct other new improvements as noted in the detailed scope. This project is required due to structural deterioration of existing vessel mooring structures, a need for a new turning dolphin and a need for a covered pedestrian walkway at the existing upland facilities. This project is needed to enhance vessel mooring and berthing safety and improve operational conditions for vessel and passenger operations. This project encompasses the replacement of an existing vessel berthing and turning dolphin structure at the west end of Berth 1; placement of a new turning dolphin between Berths 1 and 3, refurbishment of fendering and platform components at the Berth 3 float; construction of a new pedestrian cover structure over the existing sidewalk from the terminal building to the Berth 3 approach; and the placement of cathodic protection anodes on all existing offshore pile supported structures at Berths 1 and 3.
