Project Description/Justification:

The aging single lane bridge at Rink Creek is not sufficient to handle increased heavy traffic resultant from the Falls Creek Hydroelectric Project. Heavy equipment and repair materials must cross this bridge to access what is now Gustavus' primary source of inexpensive electricity. The company has laid sheet metal across the existing structure to forestall failure, but will be removing it and declining to use the bridge in its current condition. At that point it will be necessary to move heavy repair equipment in by helicopter, increasing costs significantly. This bridge is 18 feet long, and does not qualify as a "bridge," so is ineligible for bridge funds at this time.
