**Prior Funding History / Additional Information:**

No prior funding history

**Project Description/Justification:**

An inspection of the bridge has determined that there are several deficiencies which include the following: Concrete pier wall between fluted steel piles is extensively cracked transversely near waterline at Pier 4. The Pier 4 wall is anchored to steel girder diaphragms with cables near abutment 5. Other pier walls are transversely cracked near waterline. Minor drift on upstream nose of Pier 2. New pourable joint seals have been installed over piers. Pier 2 joint seal is cracked, but intact. Pier 4 joint is in fair condition with some cracks.
