Sec1 Ch17 SLA2012 P5 L4 SB160 \$1,832,600

Project Description/Justification:

This project replaces the electric power distribution system in the village of Tuntutuliak, Alaska. The current electrical distribution grid was installed in the late 1970's and is both outdated and in disrepair which contributes to frequent power outages. This project is currently in the design phase. Construction is estimated to begin in the winter of 2014. Winter construction is required due to ground conditions and the need to use ice roads.

This project was initially funded through a direct legislative appropriation to the Alaska Energy Authority (AEA) in SB160, SLA2012. The appropriated amount was based on community developed estimates that indicated insufficient funding to complete the distribution upgrades. AEA's technical review of the original estimates identified a need for additional funds in order to complete the required scope of work.
