

State of Alaska
FY2022 Governor's Operating Budget

Department of Health and Social Services
Energy Assistance Program
Component Budget Summary

Component: Energy Assistance Program

Contribution to Department's Mission

The Energy Assistance Program component is designed to promote the general welfare and safeguard the health and well-being of Alaska's population by offsetting the cost of home heating for low-income families.

Core Services

- Program staff make timely and accurate eligibility determinations to issue heating assistance payments to the client's home energy vendor.
- Provides administrative support for federally-funded tribal heating assistance programs, including grant management and oversight for Tribal organizations operating regional Alaska Affordable Heating Assistance Programs.

Major Component Accomplishments in 2020

- Assisted 5,870 households to heat their homes.
- Drafted regulation change to allow prosecution for fraud and update funding formula.
- Worked with a contractor to implement a new eligibility system for the program.

Key Component Challenges

- The volatility of fuel costs and generally high prices in many communities make it difficult to accurately project the number of households that will apply and qualify for heating assistance. This impacts the program's ability to project accurate benefit amounts since funding must cover all anticipated eligible households and to determine staffing levels needed to process applications within recommended timeframes.
- The uncertainty of the block grant funding for the federal Low-Income Home Energy Assistance Program (LIHEAP) continues to create challenges in planning and administering the program each year. The funding allocation is frequently determined after benefit levels are set and seasonal program operations begin.
- Manually collecting annual client heating and electric usage is an arduous task without a vendor portal or automation of this process. The program must currently generate Microsoft Excel spreadsheets that need to be mailed via certified mail to their vendors and then key in all the information when the sheets are returned.
- Collection of client usage will help the state determine if benefits are in fact providing the highest benefit to the most vulnerable and needy households. The present determination formula does not always adequately meet the needs of some households and more than meets the needs of others.
- The current software program used to register applications, determine eligibility, generate payments, generate reports, and provide historical data is written in Common Business Oriented Language (COBOL). Work to replace this program was done throughout FY2018. Changes were made to the program for the upcoming year as the division transitions to statewide work.
- Changing to year-round program will allow clients to submit application throughout the year, but the majority of applications will still be received at the opening of the season. Having the program be placed into the statewide workflow will allow those cases to be worked more quickly.

Significant Changes in Results to be Delivered in FY2022

- Continue implementation of federally mandated performance measures for the Low-Income Home Energy Assistance Program.
- Roll-out of eligibility determinations to the statewide workforce.
- Changing the program to a year-round program, no longer limited to November through April.
- Additional funding for weatherization services to assist additional families.

Transfer authority from Work Services to Energy Assistance Program for increased Energy Assistance benefits. The division received COVID-19 federal funding that must be spent by the end of the year, allowing an increase in benefit amounts this year or the possibility of providing a new service to support more recipients. The remaining Work Services authority is sufficient to perform the core services of the component.
